

MaxSil™ Application & Dosage

MAXSIL™: APPLICATION: MaxSil™ is available in both powder and granule form. Powder can be applied directly to the soil, followed by watering it in, or by mixing it first with water in a watering can by applying it directly to the soil, i.e. not over the plants. Granules can be applied directly to the soil.

MAXSIL™ DOSAGE: General use: 20 grams (g) per square metre (m²). Increase dosage by 50% for soils with a high organic content, e.g. rich in compost. Only one dosage is required per growing season.

Measurement tools: 1 level measuring teaspoon (tsp) = 5g; 1 level measuring tablespoon (tbs) = 15g; 1 measuring cup = 250g. Note: overdosing does NO harm.

Vegetable gardens: Before planting mix 250g of MaxSil powder in a 9 litre watering can to spray over 12.5 m²; alternatively, sprinkle ¼ to ½ tsp around each seedling or plant & water in well.

Plant pots: ½ tsp to 2 tsp of powder per pot (small to large) & water in well.

Lawns: 20 g/m²; granules: 1 cup covers 12.5 m²; or mix 1 cup of powder in a 9 litre watering can to cover 12.5 m².

Trees and Shrubs/Ornamentals, including citrus, bananas, nuts, papaya: Granules or powder as for lawns above; apply within drip line of large trees.

MaxSil Pty Ltd, 1/21 Belconnen Crescent, Brendale Qld 4500
